

What's at the seaside?

Fish

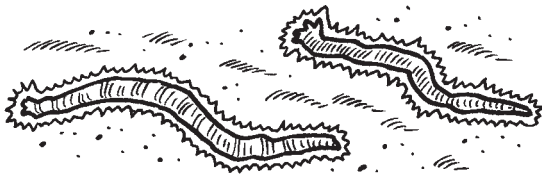

Sometimes you can be lucky enough to see fish, but most swim in deeper water. How are they different from the fish in your fish tank? Do you think they could live in a pond?

Grass

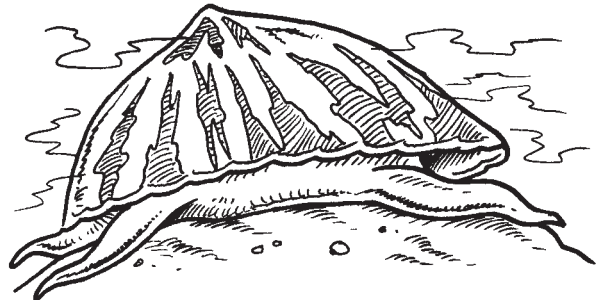

This is nearly the same as the grass at home and in fields. Why doesn't it grow further down on the beach?

Sea worms

These are a special kind of worm that live in the sand on the beach. Do you think they could live in your garden? Could the worms in your garden live on the beach?

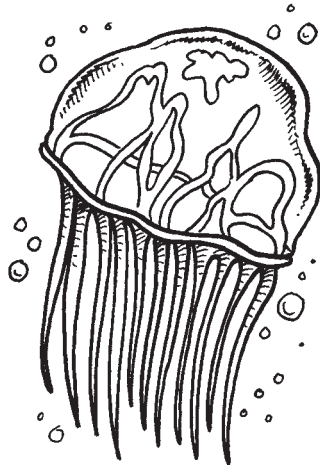

Limpets

These stick very hard to the rock and you can't get them off. Is there anything in the shell? Are they alive?

Jellyfish

These float about happily in the sea. If they get washed up, they flop on the land. Are they really jelly? Are they really fish?

Starfish

These always have five fingers. Some have thin fingers, some have fat fingers. They are hard and spiny. Their mouth is underneath. Are they really fish?
